

Poland: HTC-Human Training Centrifuge

By Richard Schluesselberger

A big success of AMST was the award of a contract for the delivery, installation and commissioning of a Human Training Centrifuge and Training Simulator, along with design and construction supervision of the new centrifuge building.

Ranshofen, AUSTRIA, November 2008

AMST Systemtechnik GmbH, Austria is proud to announce the award of a contract from the

WIML (Wojskowy Instytut Medycyny Lotniczej, Warsaw Poland)

The contract for a High Performance Human Centrifuge was signed on the 31st of October 2008 in Warsaw. AMST Systemtechnik GmbH is very proud to provide the WIML Warsaw with the leading AMST technology to meet their future challenges of pilot training.

The contract comprises the delivery, installation and commissioning of a Human Training Centrifuge and Training Simulator, along with design and construction supervision of the new centrifuge building.

The project includes the Human Training Centrifuge (HTC), Dynamic Flight Simulation (DFS) capability with high fidelity environmental simulation. The HTC is designed for open and closed loop operations, tactical training, spatial disorientation training, unusual attitude recovery and Night Vision Goggle (NVG) Training.

It is a great honour indeed, that our company was selected by WIML (Wojskowy Instytut Medycyny Lotniczej – Warsaw) as the supplier of this specialised and advanced equipment for Aviation Physiological Training, and we look forward with confidence to along and mutually beneficial cooperation in the future.
